DETAILED ACTION

Response to Amendment

1. The amendment filed on 28 July 2008 has been accepted and entered.

Allowable Subject Matter

- Claims 1-4, 6, and 8-12 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record does not disclose or reasonably suggest, along with the other claimed limitations, an infrared detector array comprising, namely: the combination of a processor circuit having a maximum detector circuit, Wherein each IR detector element for selecting the maximum output signal has at least on consecutive diode, the diodes being interconnected by their sides facing away from the IR detector element. The prior art of record, such as Scott, discloses the use of readout diodes connected via their cathodes to a common node. However, not every IR detector element has its own readout diode; the diodes are shared along detector element rows or columns. Essentially, each detector element must have an output diode, which is not the detector element itself, wherein these output diodes are connected via their cathodes to a common node as part of a maximum detector circuit.

Regarding claims 2-4, 6, and 8-10, the claims are found allowable due to their dependence upon an already allowed claim and lacking any technical errors.

Regarding claim 11, the prior art of record does not disclose or reasonably suggest, along with the other claimed limitations, an infrared detector array comprising, namely; the combination of a processor circuit having a maximum detector circuit,

Wherein each IR detector element for selecting the maximum output signal has at least on consecutive diode, the diodes being interconnected by their sides facing away from the IR detector element. The prior art of record, such as Scott, discloses the use of readout diodes connected via their cathodes to a common node. However, not every IR detector element has its own readout diode; the diodes are shared along detector element rows or columns. Essentially, each detector element must have an output diode, which is not the detector element itself, wherein these output diodes are connected via their cathodes to a common node as part of a maximum detector circuit. For further explanations, please also refer to the previous office action filed 28 March 2008, specifically the section of the Allowable Subject Matter's Reasons for Allowance of previous claim 5 as the instant claim is an independent version of previous claim 5.

Regarding claim 12, the prior art of record does not disclose or reasonably suggest, along with the other claimed limitations, an infrared detector array comprising, namely: the combination of a processor circuit having a maximum detector circuit, Wherein each 1R detector element for selecting the maximum output signal has at least on consecutive diode, the diodes being interconnected by their sides facing away from the 1R detector element. The prior art of record, such as Scott, discloses the use of readout diodes connected via their cathodes to a common node. However, not every 1R detector element has its own readout diode; the diodes are shared along detector element rows or columns. Essentially, each detector element must have an output diode, which is not the detector element itself, wherein these output diodes are connected via their cathodes to a common node as part of a maximum detector circuit. For further explanations, please

also refer to: Sections 1.3 and 1.4 of the Reasoned Statement for PCT/AT2004/000331; and the previous office action filed 28 March 2008, specifically the section of the Allowable Subject Matter's Reasons for Allowance of previous claim 7 as the instant claim is an independent version of previous claim 7.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments, see pages 10-11 of the amendment, filed 28 July 2008, with respect to claims 1-4, 6, and 8-12 have been fully considered and are persuasive. The rejections of the claims have been withdrawn. Please see the above section, Allowable Subject Matter, for further explanation.

Conclusion

 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

US 2008/0251721 A1 – Ueno discloses an infrared detector array where each detector element is a diode.

US 6,707,497 B1 – Pantigny discloses a pixels biasing circuit having a diode for each pixel connected via resistive ladder network.

US 5,731,621 A – Kosai discloses a multiband detector element having the diode detector elements connected via their angles to each other

Application/Control Number: 10/574,402

Art Unit: 2884

US 3,495,086 A – Scott discloses the use of readout diodes connected via their cathodes to a common node but as common rows or columns, not individually per detector element.
